

Update manual server version ingenious.V12

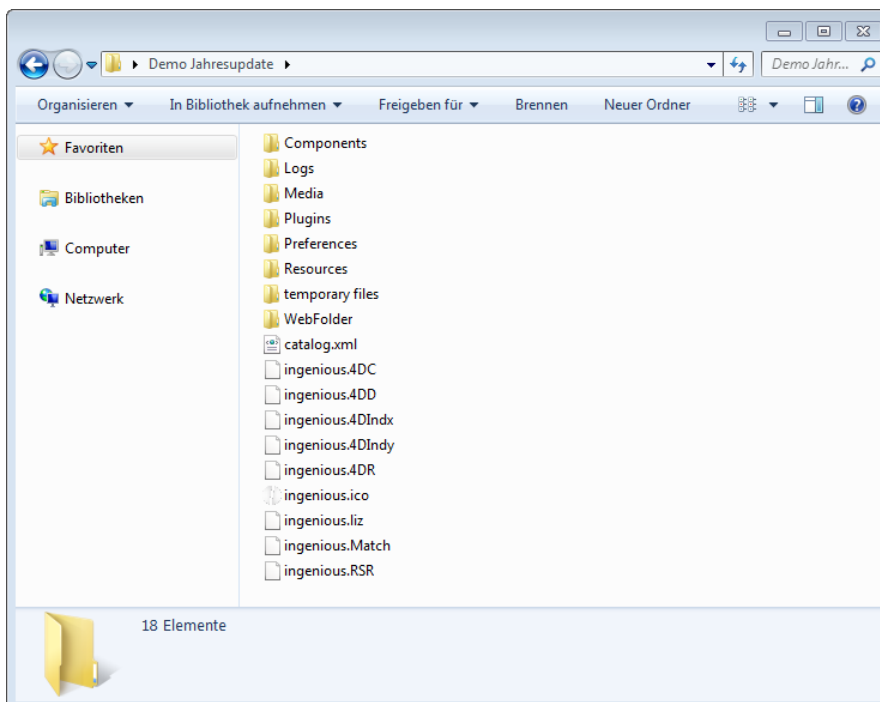

1. Step: Download

Download the zip file with the latest program files from our ftp-server and unzip them.

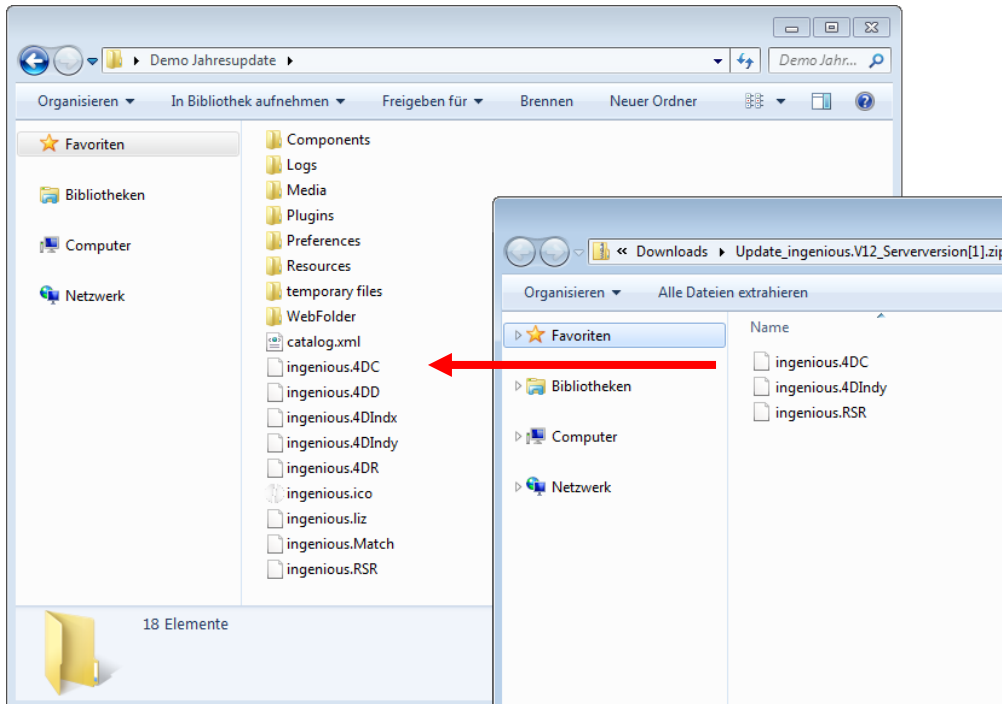

2. Step: Backup

Before starting the update of your installation, please close the program on all client computers. Afterwards create a backup of your database using the backup tools (MSC) of the 4D server. Close the 4D server software and open the database directory. Backup the complete content of that folder to a separate directory.

3. Step: Update your installation

Copy the files from the downloaded directory „Update ingenious.V12 Serverversion“ to your original folder with the ingenious database files. Confirm to overwrite the existing files.

After the update you can continue working with ingenious.V12.

Please also follow individual instructions for database check or repair if necessary.

Note:

You will also find the text file "VariablesAndArrays_3_10_1.txt" on the FTP server. It contains all the variable names used by Ingenious in methods and scripts. If you write your own scripts in your installation, these variables must not occur. If you have any problems with your own scripts please check the variable names.
