

Update-Manual Serverversion ingenious.basic

1. Step: Download

Download the update files provided in a zip archive from our FTP server and unzip them.

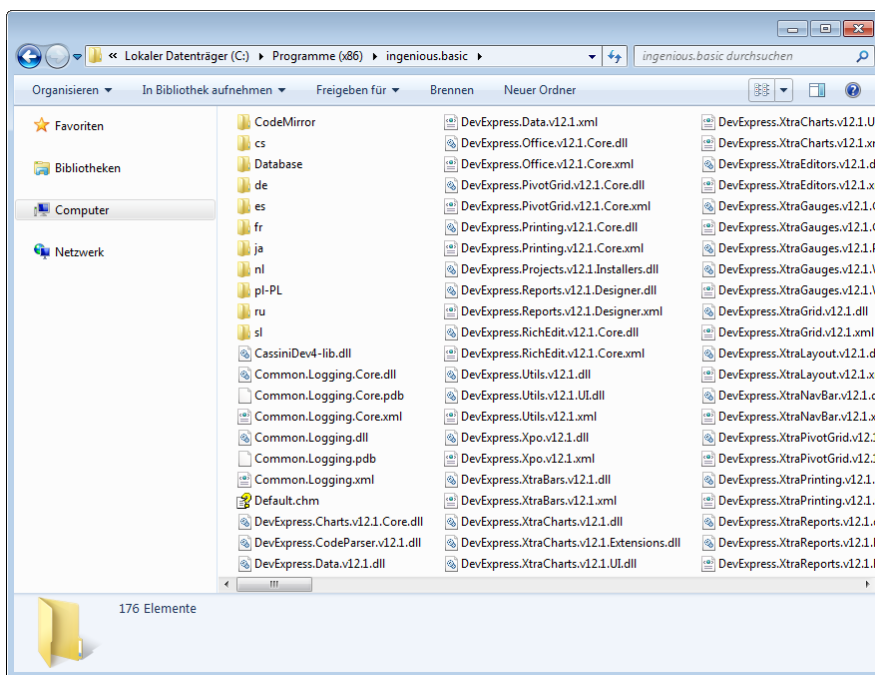

2. Step: Backup of the database

Use the integrated backup function of the Microsoft SQL Server or the provided batch files to create a database backup.

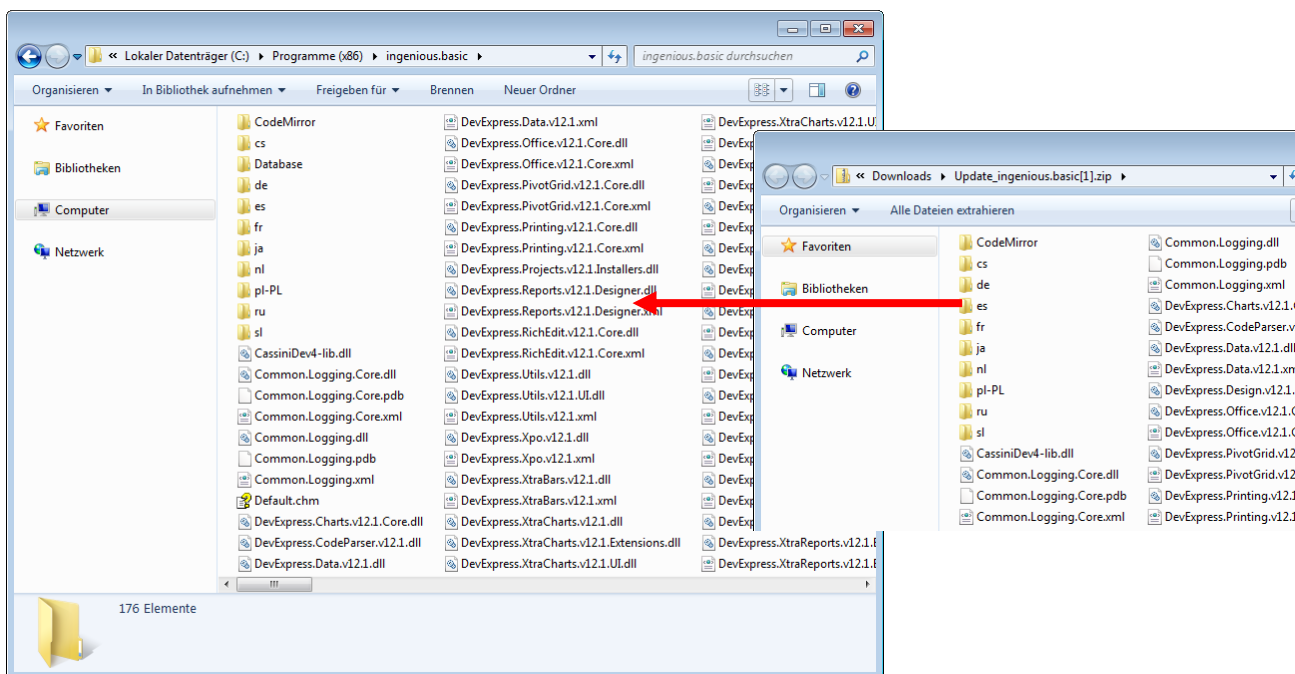

3. Step: Backup of the installation folder

Please close the software ingenious.basic on all clients and change to the installation directory on the server. Please save the entire folder in an extra directory.

4. Step: Updating the version

Copy the files from the downloaded "Update ingenious.basic" directory to your installation folder. Confirm the overwriting of existing files.

After updating, you can continue working with ingenious.basic as usual.
