

The annual update for ingenious.V12 version 3.10.1 contains the following features / enhancements and bug-fixes

New features:

- Automatic script event: Production planning - Finalize planning
- PPS cart distribution, optionally allocate all cuts to a workstation per project afterwards
- New API method vbRecalcItems:=true / EXEC_onPrjConvert -> Enforces the recalculation of the project items when converting a project
- New Variable vbHardLocked, that's activated by script to completely open a project document in the read-only mode
- Export list vies of the main modules (Contacts, Items, Workflow, Purchasing, Receipt entry, Projekt times) into a csv file
- Mass operation to allocate items to additional directories
- Program settings - New category of file attachments in the selection lists, additional category field for each file attachment
- Additional options for the data optimization
 - All project documents in the database
 - Collective changes of multiple entries with the same status
 - Alternative entry of a date instead of the number of days
 - Definition of deleting user fields of projects older than ...
 - Optional deleting user fields of already deleted assigned data record
- Standardization of the menu and handling of the measurement line with the alternative, optional and post calculation items -> Switch between measurement line and PosP over the menu
- Definition of a start module per user
- New patterns for objects in picture scripts (G1 to G12 and Fill:{picture name}, Tile:{picture name}) after updating the Canvas plugin
- Upgrade-Check for reading out the scope of customization
